

bugcrowd

The Bugcrowd Difference

“Switching to a managed program with Bugcrowd **reduced our required time and effort by 80%** — allowing us to focus on what matters most.”

- Jonathan Hunt,
VP of Information Security,

inVISION

Longest tenure running managed programs

Bugcrowd has more than **double the experience** running fully managed programs.

Highest signal-to-noise ratio available

Fully managed programs with more actionable insight = **95% Signal to Noise Ratio**

Only success-from-the-start blueprint

More experience growing successful programs means **more value now and in future.**

Largest in-house triage and support teams

Full-time in-house Triage Engineers, Account Managers, and a Hacker Success Team **for every program.**

Bugcrowd developed the world's first fully managed crowdsourced security model to help customers find and fix critical vulnerabilities, faster. With double the industry experience in this approach, we've created a blueprint for program success born of the largest database of crowd, vulnerability, and program intelligence ever amassed. Together with the most flexible and extensible platform, we're not only delivering success from the start, we're the **#1 crowdsourced security platform to grow with.**

Lowest time to first touch

We average **<12 hours to first human touch** on all submissions.

Only provider of baked-in remediation advice & re-testing

We provide remediation advice and optional re-testing to **ensure what's found is fixed.**

No submission-based pricing nor fees

We're in the business of **helping you get better**, not profiting from repeat mistakes.

Most robust SDLC connection functionality

JIRA and other integrations **reduce manual processes** to streamline remediation.

Only provider enabling developer education

Integrations with Dev education modules help you **build better from the start.**

#1 crowdsourced security platform to grow with.
